LIGHTING DESIGN

The new Health Club at the Bentall Centre in Kingston was constructed on the 4th Floor of a fully operational shopping centre. The swimming pool was constructed from stainless steel because of the limited access, and an unusual combined air duct and water feature developed as a result.

The Club has its heat and hot water supplied from a Combined Heat and Power plant which also supplies some 80% of the electrical demand. All of the studios and training rooms are mechanically ventilated and air conditioned due to the very high occupancy loads.

High performance low energy lighting was specified throughout along with scene-set controls to maximise flexibility. The lounge provides a moment of calm amidst the busy club.
