

WALSALL BUS STATION

Walsall, Birmingham

Date

1997 – 2000

Architect

Allford Hall Monaghan Morris

Project Value

£ 5m

Project Status

Completed 2000

An extraordinary new building, the bus station is designed to corral and organise the multitude of busses that operate out of the Walsall Town Centre following deregulation.

Atelier Ten were involved in all of the air quality appraisals, the design and integration of M+E services, and the infrastructure diversion necessary to implement this very large structure.

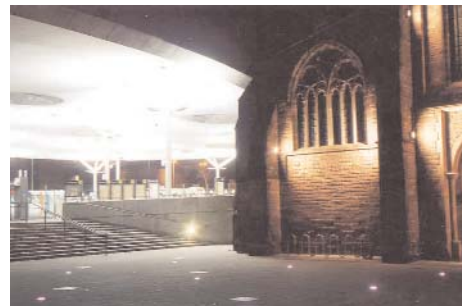

The station will be finished with a living green roof top to redress the CO₂ imbalance generated by the buses below.
